Individual Projects

- Developed a full React + TypeScript movie-platform app (Netflix-style). Built dynamic pages with Styled Components, integrated Firebase for authentication + data storage, and connected a movies API for search, filtering, and rendering content. Implemented modular architecture, clean state management, responsive UI, and smooth user flows.
- Created an individual project using HTML, CSS/SCSS, and vanilla JavaScript. Practiced component-like structuring, reusable styles, adaptive layouts, localStorage logic, and small interactive features.

Team Project — Online Marketplace App (Wildberries clone)

Role: Team Lead & Tech Lead

- Structured project architecture from scratch and guided the team through setup, branching strategy, and workflow.
- Taught teammates merging, resolving conflicts, and keeping the codebase clean.
- Distributed tasks fairly, reviewed pull requests, and helped solve technical blockers.
- Used a mock API to simulate backend behavior and built dynamic rendering logic on the front.
- Collaborated remotely via Zoom and GitHub, keeping communication clear and the pace steady.
